Write a C program for the "TODO" list.

Your program should read your to-do list from the file (csv, txt, etc.).

Your program gets parameters, you should control two operations.

1. "List" operation - This operation reads the file and prints the screen.

2. "Add" operation - This operation adds text to your file.

todo.exe list

todo.exe add "check shopping list"

todo.exe delete 1 //(row number)
